

A Cleaner Clean Dry Ice Blasting

Increased Productivity
Environmentally Friendly
Safe on Equipment
No Downtime

Dry Ice Blasting, used in almost all industries, eliminates a variety of surface contaminants.

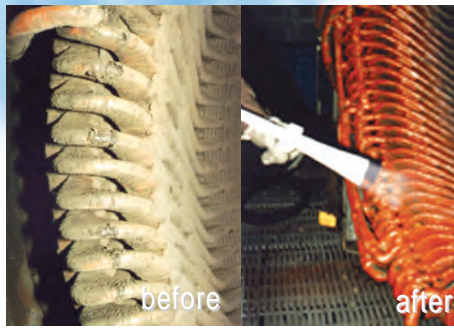

Non abrasive, non toxic, non corrosive, completely dry without any blast media cleanup - is an excellent solution for cleaning production equipment, conveyors, electrical systems, printing and packaging equipment, fire restoration and mold remediation and so much more.

how does dry ice blasting clean?

During the cleaning process, dry ice blasting lifts dirt away. Particles of dry ice propelled at high speed by compressed air, impact and remove unwanted contaminants. The particles of dry ice then sublime, safely returning to the atmosphere in a natural state as carbon dioxide gas. The underlying equipment surface is completely dry, undamaged and the waste falls to the floor.

benefits of dry ice blasting

no down time

The process is fast and can be performed on-line without disassembly and without need for drying time.

no damage

Dry ice blasting is non-abrasive. It quickly removes most contaminants without damage to switches, panels, lines, tubes, wiring or belts.

eco-friendly

Dry ice blasting replaces chemical or solvent based cleaning and manual scraping.

quick & thorough

Get a more detailed and quicker clean with dry ice by getting into nooks and crannies inaccessible by hand.

safe on electrical

This versatile process cleans heavy buildup without damage to sensitive areas like electrical components, switches, wiring, photo electric sensors, etc.

fire damage - soot on concrete

maintenance - machine cleaning

electrical - generator cleaning

mass transit - engine cleaning
